

CHINEDU OTUTU

Software Engineer, Backend

@ chineduotutu3@gmail.com <https://www.linkedin.com/in/otutu-chinedu-2a5b30195/> <https://github.com/otutukingsley>

SKILLS

TypeScript	JavaScript	PHP/Laravel
SQL	Node.js	Hono
Express.js		
Zod	REST APIs	Next.js
GraphQL		
PostgreSQL	MySQL	MongoDB
Drizzle ORM	Eloquent	
SQL Optimization	Docker	BullMQ
GCP	AWS	Redis
GitHub Actions		
Vitest	Code Reviews	Claude
React.js	Nuxt.js	RBAC
RLS		
Multi-Tenant Systems		
Unit/Integration Testing		

PROJECTS

GreenPlaces

<https://greenplaces.com/>

All-in-one sustainability platform that helps organizations manage carbon reporting, emissions reduction, and climate ROI.

RealFevr

<https://realfevr.com/>

Portuguese Web3 startup building a gamified ecosystem for licensed sports digital collectibles.

Journal Africa

<https://journal.africa/>

Independent digital publication delivering news and analysis across multiple subject areas.

EDUCATION

Mechanical Engineering

Federal University of Technology,
Owerri

09/2015 – 10/2020
Owerri, Nigeria

GPA
3.9 / 5.0

CERTIFICATIONS

AWS Certified Solutions Architect

Amazon Web Services

EXPERIENCE

Backend / Platform Engineer

GreenPlaces

07/2025 – Present North Carolina, United States

TypeScript · Node.js · PostgreSQL · Redis · BullMQ · AWS · Hono · Zod

- Designed and built cross-database identity synchronization across three PostgreSQL clusters using a transactional outbox, LISTEN/NOTIFY relay, keyset-based batch processing, BullMQ workers, idempotent consumers, and a budgeted reconciliation service; shipped the cutover behind a feature flag with zero downtime.
- Led the migration of ~50 REST endpoints to a multi-tenant TypeScript service, implementing schema migrations, data backfills, row-level security, a reconciliation ledger, and defense-in-depth authorization across middleware, services, and PostgreSQL.
- Built platform data and document pipelines covering S3-backed file processing, bulk operations and asynchronous exports, while improving reliability through Redis rate limiting, database indexing, concurrency-safe writes, pagination limits, and timeout handling across four job queues.
- Extended the authorization and notification infrastructure with ownership/location-scoped permissions, batched role evaluation, distributed job coordination, event deduplication, failure recovery, and circuit-breaker handling; contributed to a 10,000+ assertion Vitest suite covering critical authentication and platform workflows.

Full Stack Software Engineer

GreenPlaces

2023 – 07/2025 North Carolina, United States

PHP/Laravel · Livewire · MySQL · AWS

- Co-owned the emissions calculation engine across three reporting scopes, implementing multiple calculation methodologies, unit conversions, geography-based emission-factor resolution, versioned GWP datasets, bulk processing, and audit trails for reproducible reporting.
- Built enterprise integrations and authentication infrastructure, including multi-tenant SAML 2.0 SSO and the NetSuite ERP integration with OAuth, encrypted credentials, background synchronization, sandbox support, and feature-flagged rollout.
- Modernized high-volume data workflows and supported the Laravel-to-TypeScript migration, moving large exports to asynchronous S3-backed jobs, consolidating shared location processing across five consumers, and building the internal API, webhooks, authentication, and rate limiting used by the new service.

Frontend Engineer

RealFevr

04/2022 – 05/2023 Lisbon, Portugal

Next.js, React, TypeScript, GraphQL, Cypress, SCSS

- Built and maintained features across multiple client-facing products in the RealFevr Web3 ecosystem using Next.js, React, and TypeScript, including form validation, infinite scrolling, and data visualizations.
- Integrated frontend applications with GraphQL APIs to enable users to analyze their digital assets, following a TDD workflow with unit and end-to-end testing using Cypress.
- Collaborated in product discussions and sprint planning to prioritize features, improve user experience, and deliver against sprint goals.

Full Stack Developer

SimpooBusiness

04/2021 – 03/2022 Lagos, Nigeria

React, Node.js, MySQL, Docker, Redux, Tailwind CSS

- Built an e-commerce and inventory management platform in collaboration with engineers, designers, and product managers, using React, Redux, Tailwind CSS, and supporting backend services.
- Built and maintained CI/CD pipelines with Docker, reducing deployment time by 50%, while participating in code reviews and improving application reliability.
- Conducted code reviews and recommended improvements that reduced bugs and deployment-related production issues.

Frontend Developer

Digital Nest

09/2020 – 03/2021 Abuja, Nigeria

React, Redux, JavaScript, Node.js, Styled Components

- Migrated Journal Africa from WordPress to a React application, using Redux and Styled Components, improving application performance and supporting growth beyond 1,000 subscribers.
- Collaborated with designers and product teams to build responsive and intuitive interfaces while integrating with backend services and maintaining delivery quality in an Agile environment.
